

Abstract

The invention relates to a control system for a vehicle, said system having a screen display (2) having a plurality of display areas for displaying entries in a menu structure having a plurality of menu levels, a manual operating means (3) for selecting and/or activating at least one entry on a current menu level in the menu structure, voice control means (6) for redundantly selecting and/or activating at least one entry in the menu structure. According to the invention, the voice control means (6) evaluate the current menu level and/or an active display area and/or a current cursor position and determine an intended control operation on the basis of the evaluation, the voice control means (6), after they have been activated, starting at least one voice dialog, which is associated with the intended control operation determined, for the purpose of selecting and/or activating one or more entries in the menu structure.
